

# Itose Market Securities

## Capital Vice Trading Strategy — Inception Report

Radu Briciu, BSc  
Founder & Manageing Partner

April 4, 2025

# Vision

**Itose Market Securities** is a proprietary trading fund focused on identifying and exploiting legal asymmetries and logistical inefficiencies in the global vice trade—beginning with premium commodity-grade tobacco.

Our mission is to:

- ▶ Exploit inefficiencies in vice-related commodity logistics
- ▶ Capture alpha from opaque regulatory arbitrage
- ▶ Develop a diversified strategy grounded in real-world asset flows

# What is Capital Vice?

**Capital Vice** refers to the strategic allocation of capital into legally gray or overregulated markets where inefficiencies create opportunities.

Examples include:

- ▶ Specialty tobacco importation
- ▶ Alcohol distribution logistics
- ▶ Exotic agricultural derivatives

# Anchor Asset: Itose Tobaccos

Our first operational asset is a micro-importation pipeline:

- ▶ **Origin:** UK-based boutique tobacco producers
- ▶ **Destination:** Romanian specialty consumer market
- ▶ **Model:** On-demand digital storefront using Shopify
- ▶ **Edge:** Tax arbitrage, shipping efficiency, regulatory expertise

This business provides proof-of-concept cash flow and asset valuation for fund modeling.

# Fund Structure

- ▶ Entity: Limited Partnership (GP/LP model)
- ▶ Location: Jurisdiction TBD (favorable for cross-border commodity flows)
- ▶ Anchor Asset: Equity stake in Itose-Tobaccos and its logistics IP
- ▶ Capital Use: 80% operational scaling, 20% R&D on secondary vice channels

# Compliance + Risk Management

## Core Principles:

- ▶ Full legal review of all import/export activity
- ▶ Transparent disclosure to LPs on risk classification
- ▶ Tax and excise compliance in both origin and destination countries
- ▶ No handling of illicit substances or embargoed goods

# Expansion Thesis

Once operationally proven, the model can expand into:

- ▶ Other EU tobacco markets with fragmented supply chains
- ▶ Adjacent vices (e.g., niche alcohols, botanicals, restricted agro-products)
- ▶ Algorithmic trade modeling of vice-related commodities

# Capital Objectives

- ▶ Target Fund Size: \$2–5M seed capital
- ▶ Return Objective: 15–25% IRR over 3 years
- ▶ Exit Strategy: Ongoing cash flow and eventual acquisition or secondary share liquidity

# Final Remarks

**Itose Market Securities** represents a new frontier in capital intelligence:

- ▶ Profitable strategies hidden in plain sight
- ▶ Ethical engagement with regulated vice markets
- ▶ Agile, niche-focused fund design

*This is Capital Vice.*
