

BOCOR Case for Bud: Equitable Global Access to Medical THC

© Radu Briciu¹

March 27, 2025

Access to medical cannabis, particularly THC, remains unequal. We propose a strategy combining:

- ▶ International telehealth
- ▶ Digitally valid prescriptions
- ▶ Legal postal delivery systems

This model respects both international and domestic regulations while improving patient access.

- ▶ Many patients lack safe, legal access to THC.
- ▶ Unregulated sources pose safety and legal risks.
- ▶ Some countries allow:
 - ▶ Medical cannabis export
 - ▶ International telehealth
- ▶ An opportunity exists to link these systems.

Export-Friendly Countries:

- ▶ Canada
- ▶ Germany
- ▶ Netherlands

Telemedicine Frameworks:

- ▶ International prescriptions allowed if compliant

Postal Systems:

- ▶ Licensed couriers can ship medical THC legally
- ▶ Requires compliance with customs and controlled substances laws

Step 1: Source Country

- ▶ Legal cultivation
- ▶ Telehealth infrastructure
- ▶ Export permits

Step 2: Telehealth Platform

- ▶ GDPR/HIPAA compliant
- ▶ Licensed physicians issue digital prescriptions

Step 3: Licensed Shipping

- ▶ Partner with licensed pharmacy
- ▶ Fill and package per IATA/INCB guidelines
- ▶ Ship with legal couriers

Step 4: Destination Interface

- ▶ Personal import exemptions (where legal)
- ▶ Otherwise, legal petitioning may be needed

- ▶ Full legality in the source country is essential
- ▶ Avoid direct import law violations
- ▶ Prioritize:
 - ▶ Patient consent
 - ▶ Data protection
 - ▶ Pharmaceutical-grade quality

- ▶ Model occupies legal gray areas in some nations
- ▶ Allows access now while policy evolves
- ▶ Could inform international medical cannabis frameworks
- ▶ Sets a precedent for equitable healthcare distribution

Global equity in THC access is achievable.

- ▶ International law permits compliant models
- ▶ Technology enables secure, legal systems
- ▶ Real-world testing can inform regulation
